

Private Jet Booking System - Admin portal

1. Overview

The Private Jet Booking System facilitates the management of private jet bookings and related operations for administrative users. This document outlines the additional feature of allowing administrators to upload dynamic background images for the user interface.

2. Goals

- Enable administrators to personalize the user interface by uploading dynamic background images.
- Enhance user experience by providing a visually appealing and customizable interface.
- Ensure seamless integration with existing system functionalities.

3. User Roles

- **Administrator:** Manages bookings, inquiries, aircraft profiles, empty legs, and now background images.

4. Features

4.1. Dynamic Background Image Upload

- **Upload Images:**
 - Administrators can upload background images through an intuitive interface.
 - Supported image formats include JPEG, PNG, with recommended dimensions for optimal display.
- **Preview and Select:**
 - Preview uploaded images to assess their suitability for the user interface.
 - Select and apply images as dynamic backgrounds for the main dashboard and possibly other pages.

- **Manage Uploaded Images:**
 - View a gallery of uploaded images with options to edit, delete, or reorder them.
 - Ensure seamless integration with system themes and color schemes.

4.2. Integration with User Interface

- **Customization Options:**
 - Provide options to customize interface themes based on uploaded background images.
 - Ensure compatibility with existing UI elements and design principles.

5. Non-functional Requirements

- **Performance:** Optimize image loading times to maintain system responsiveness.
- **Scalability:** Handle a growing library of uploaded images without impacting performance.
- **Security:** Implement secure image upload mechanisms to prevent unauthorized access.

6. User Interface Design

- **Enhanced Visual Appeal:**
 - Ensure uploaded background images complement the overall design aesthetic.
 - Maintain consistency in UI design for a cohesive user experience.

7. Technical Requirements

- **Backend:** Extend existing storage solutions to accommodate image uploads securely.
- **Frontend:** Implement dynamic rendering of background images using modern frontend frameworks.
- **Compatibility:** Ensure cross-browser compatibility and responsiveness across devices.

8. Constraints

- Adhere to image upload size limits and format requirements based on system capabilities.
- Address potential bandwidth constraints for image loading, particularly in low connectivity scenarios.

9. Assumptions and Dependencies

- Availability of sufficient storage capacity for image hosting and management.
- Support from IT infrastructure for seamless integration and deployment.

10. Risks

- Potential delays in image rendering if not optimized for various screen resolutions.
- Security vulnerabilities associated with improper image handling and storage.

11. Project Timeline

- **Phase 1 (Development):** 3 month
- **Phase 2 (Testing and QA):** 2 weeks
- **Phase 3 (Deployment and Training):** 1 week
- **Phase 4 (Post-launch Monitoring):** Continuous

12. Conclusion

The addition of dynamic background image upload functionality will empower administrators to personalize the user interface of the Private Jet Booking System Admin Portal. By implementing this feature, the system aims to enhance user engagement, improve aesthetics, and provide a more tailored experience for administrative users managing private jet bookings and related operations.
