

Business Requirements Document (BRD) for Private Jet Admin System

1. Overview

The Private Jet Admin System (PJAS) is designed to facilitate seamless booking management, aircraft management, user management, and operational oversight for private jet charter services.

2. Functional Requirements

2.1. User Management

- **View Users:** View a list of all users registered in the system.
- **Manage Profiles:** Ability to edit user profiles including contact information and preferences.
- **View User Bookings:** Access to all bookings associated with a specific user.

2.2. Booking Management

- **Create Bookings:** Ability to create new bookings for users.
- **View Bookings:** View a list of all bookings made through the system.
- **Modify Bookings:** Edit details of existing bookings (e.g., change flight time, passenger details).
- **Update Booking Status:** Change the status of a booking (e.g., confirmed, pending, canceled).
- **Cancel Bookings:** Cancel existing bookings with appropriate notifications.

2.3. Aircraft Management

- **View Aircraft:** Display a list of all aircraft available for booking.
- **Add New Aircraft:** Ability to add new aircraft to the system with details such as model, capacity, and availability.
- **Archive Aircraft:** Remove aircraft from active listing without permanent deletion, for historical purposes.

2.4. Flight Management

- **Add Flights:** Schedule new flights specifying departure, destination, date, and time.

- **Edit Flights:** Modify details of existing flights (e.g., change departure time, add stops).
- **Archive Flights:** Remove flights from active schedules while retaining historical data.

2.5. Empty Legs Management

- **Add Empty Legs:** List available empty legs (unbooked flights) for potential bookings.
- **Edit Empty Legs:** Modify details of empty legs including pricing and availability.

2.6. Image Management

- **Upload Background Images:** Ability to upload and manage background images for the system interface.

2.7. Enquiry Management

- **View Enquiries:** Access a list of all enquiries received through the system.
- **Respond to Enquiries:** Provide responses to enquiries directly from the system.

2.8. Dashboard and Reporting

- **Dashboard Overview:** Provide a comprehensive dashboard displaying key metrics such as:
 - Number of bookings per day/week/month.
 - Revenue generated.
 - Utilization rates of aircraft.
 - User activity and engagement metrics.
- **Reports:** Generate detailed reports based on historical data for analysis and decision-making.

3. Non-Functional Requirements

- **Security:** Implement robust authentication and authorization mechanisms to ensure data privacy and system security.
- **Performance:** System should be responsive and able to handle multiple concurrent users and bookings without degradation.
- **Scalability:** Design the system to scale efficiently with increasing user and booking volumes.
- **Reliability:** Ensure high availability with minimal downtime for maintenance.
- **Usability:** Intuitive user interface for ease of use by administrators and users alike.

4. Technical Requirements

- **Technology Stack:** Specify the technologies to be used (e.g., backend framework, database, frontend technologies).
- **Integration:** Ability to integrate with payment gateways for processing transactions.
- **Accessibility:** Ensure compatibility with major web browsers and mobile devices for user accessibility.

5. Constraints and Assumptions

- **Data Privacy:** Compliance with data protection regulations (e.g., GDPR, CCPA).
- **Availability of Data:** Availability and accuracy of flight and aircraft data from reliable sources.
- **User Training:** Provision of user training and support for system administrators.

6. Dependencies

- **External Dependencies:** Integration with external systems for real-time flight information and scheduling.

7. Milestones and Deliverables

- **Milestones:** Define key milestones for development, testing, and deployment phases.
- **Deliverables:** Finalize deliverables including documentation, training materials, and system deployment.

8. Acceptance Criteria

- **Functional Testing:** Ensure all functional requirements are met through rigorous testing.
- **User Acceptance Testing (UAT):** Conduct UAT with stakeholders to validate system usability and performance.

9. Future Enhancements

- **Feedback Mechanism:** Implement a mechanism for users to provide feedback for continuous improvement.
- **Additional Features:** Plan for future enhancements such as mobile applications, additional booking options, and enhanced reporting capabilities.

This PRD provides a comprehensive outline of the features, requirements, and considerations for developing the Private Jet Booking System. Adjustments can be made based on specific business needs and technical capabilities.
