

**PHLIPTECH PROPOSAL
FOR
ESTATE MANAGEMENT
PLATFORM
LEKKI GARDENS ESTATE
PHASE 4**

Introduction

This document is in response to the RFQ from Landlords and Residents Association of Lekki Gardens Estate Phase 4 (LGP4), a fully-serviced residential estate located at Ajiwe, Ajah Lagos, as it seeks proposals from qualified vendors to design and deploy a secure Estate Management Platform. This platform aims to streamline financial transactions, offer additional community management features, and enhance the overall user experience.

PhlipTech, a Lagos-based technology consulting company with about 30 years of combined experience in building and delivering software products, is well-positioned to deliver an exceptional Estate Management Platform for Lekki Gardens Estate Phase 4. Our expertise in developing robust, secure, and user-friendly platforms across various industries ensures that we can meet and exceed the expectations outlined in the RFQ.

Key Personnel and Qualification

- **Babajide Ojo, Technical Lead:** With 8 years of experience in mobile and web application development, Babajide has led numerous successful projects for clients and in-house at multimillion dollar, ensuring high-quality and scalable solutions. His expertise in Flutter and Next.js amongst others, will be instrumental in creating a seamless user experience for the estate management platform.
- **Samuel Ogunkoya (PMP), Product & Innovation Lead:** Samuel brings 6 years of experience in leading product and operations, with products being used in leading banks and fintechs. His proficiency in Agile methodologies and project management will ensure that the project is delivered on time and within budget, while also meeting all specified requirements.
- **Ezeh Chuwkudi, Senior Software Engineer:** Ezeh has 7 years of experience in mobile and web application development. His deep knowledge of Node.js and Express.js will be crucial in developing a robust backend for the platform, ensuring secure and efficient data handling.
- **Adedire Solomon, Software Engineer & Cloud Architect:** With 5 years of experience in web and cloud solutions. His skills will ensure that the platform is scalable, secure, and capable of handling high traffic volumes, providing a reliable service to all users.

Our team has successfully developed and deployed platforms that have consistently improved operational efficiency, enhanced user satisfaction, and streamlined financial transactions for our clients. We are confident in our ability to deliver a state-of-the-art solution that will significantly improve operational efficiency, enhance resident satisfaction, and streamline financial transactions for Lekki Gardens Estate Phase 4.

Technical Proposal

Project Plan and Timeline

1. Requirements Gathering and Analysis (1 week)
2. Design Phase (3 weeks)
3. Development Phase (8 weeks)
4. Testing and Quality Assurance (2 weeks)
5. Deployment and Integration (2 weeks)
6. User Training and Documentation (2 weeks)

Total estimated time: 18 weeks

Technical Approach and Methodology

Our approach will focus on developing a secure, scalable, and user-friendly platform that meets all the requirements specified in the RFQ. We will employ an Agile development methodology to ensure flexibility and continuous improvement throughout the project lifecycle.

Proposed Technology Stack

Flutter (for cross-platform mobile app):

- **Single Codebase:** Flutter allows you to write code once and deploy it on both iOS and Android platforms, saving development time and effort.
- **Performance:** Flutter's native-like performance is achieved through its Dart framework, which compiles to native ARM code.
- **Customizable Widgets:** Flutter offers a rich set of customizable widgets, enabling the creation of visually appealing and consistent UI across platforms.

Next.js (for web interface):

- **Component-Based Architecture:** Next.js extends React's component-based approach, promoting modularity and efficiency in development.
- **Server-Side Rendering (SSR) and Incremental Static Generation (ISG):** Next.js supports SSR for faster initial page loads and ISG for dynamic content generation, blending static site benefits with dynamic data flexibility.

Backend: NestJS

- **Scalability for Microservices:** Designed for scalability, NestJS organizes applications into modules and services, ideal for building and deploying microservices architectures.
- **Rich Ecosystem with TypeScript:** NestJS benefits from Node.js's extensive npm library support, while TypeScript enhances code maintainability and developer productivity across frontend and backend development.

Database: MongoDB

- **Flexible Schema:** MongoDB's document-oriented nature allows for flexible and dynamic schemas, accommodating evolving data requirements.
- **Scalability:** MongoDB scales horizontally with ease, making it suitable for handling large volumes of data and high traffic..

Cloud Infrastructure: AWS

- **Scalability:** AWS provides elastic and scalable cloud infrastructure, allowing your application to grow seamlessly.
- **Reliability:** AWS offers high availability with data centers in multiple regions and robust redundancy measures.
- **Security:** AWS provides a wide range of security services and features to protect your applications and data.

Payment Integration: Paystack and Monnify

- **Security:** Both Paystack and Monnify are known for their robust security measures, ensuring safe and secure transaction.
- **Ease of Integration:** They provide well-documented APIs and SDKs that simplify integration into your application.
- **Support for Local Payments:** Paystack and Monnify support various local payment methods, making them suitable for the Nigerian market.
- **Developer-Friendly:** Their developer-friendly approach includes sandbox environments for testing and comprehensive documentation.

Access Control Integration: Integration with existing turnstile systems

- **Compatibility:** Integrating with existing turnstile systems ensures compatibility and extends the lifespan of your current infrastructure.
- **Scalability:** This integration allows for scalable management of access rights and permissions across different user groups.

Features Implementation

1. User Account Management

- Secure registration and login system
- Profile management for homeowners and occupiers
- Password recovery with multi-factor authentication

2. Wallet System

- Seamless fund management
- Real-time balance updates and transaction history
- Integration with multiple payment gateways

3. Prepaid Electricity Vending

- Integration with the estate's existing electricity system
- Secure token generation and delivery
- Automated capture of outstanding tokens

4. Service Charge and Dues Payment

- Flexible payment options (monthly, quarterly, annual)
- Automated interest application for late payments
- Detailed transaction history

5. Access Control and Visitor Management

- QR code-based access management
- Integration with turnstile systems
- Visitor history tracking

6. Community Engagement Features

- Polling system with one vote per house
- Suggestion and complaint management system
- Broadcast and individual messaging capabilities

Financial Proposal

Cost Breakdown

1. **Design and Development:** ₦8,000,000
2. **Deployment and Integration:** ₦2,000,000
3. **Training and Documentation:** ₦1,000,000
4. **First Year Maintenance and Support:** ₦1,000,000

Total Project Cost: ₦12,000,000

Payment Schedule

- 30% upon contract signing
- 30% at the end of the development phase
- 30% upon successful deployment
- 10% after the first month of successful operation

Additional Requirements

Support and Maintenance Plan

- 24/7 technical support via phone, email, and ticketing system
- Regular system updates and security patches
- Quarterly system health checks and optimization

Warranty and SLAs

- 99.9% uptime guarantee
- Maximum 2-hour response time for critical issues
- 12-month warranty on all developed features

Licensing and Compliance

- All necessary integrations will be made with licensed payment partners to ensure compliance with CBN regulations
- Our solution will adhere to NERC guidelines for electricity vending systems

Client Testimonials

- **SecondWallet:** “PhlipTech’s platform has redefined our financial operations, making them seamless and secure. Their team’s expertise and dedication are unmatched.”
